

REGO-FIX Spindle taper cleaner

Cleaning of heavily soiled fleece sections

In the case of heavily soiled fleece sections in the course of using our products, the question occasionally comes up of a suitable cleaning agent to remove coarser dirt from the spindle taper cleaner.

In view of the plastics we use, a certain amount of caution is required when using possibly aggressive cleaning agents (liquid).

The well-known company MOTOREX-BUCHER GROUP AG, 4900 Langenthal, Switzerland has tested a cleaning agent suitable for our products:

Universal Cleaner MOTOREX OPAL 5000

Important:

// Coarse dirt on spindle taper cleaners should be removed gently with a **soft** brush to support the cleaning agent

// The resistance of our various plastic materials to the MOTOREX OPAL 5000 cleaner is generally good. As a cautious step, we recommend that the duration of time spent in the above-mentioned cleaner liquid should **not exceed 30 minutes**
